                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8 8
                                                                                                                                                                                                                                                                                                             The present DNA sequence is a fusion construct, comprising the N-terminal region of mature human interleukinz (IL2) and soluble CD39 (solCD39) coding region, having apyrase activity. This results in high levels of coding region, having apyrase activity. This results in high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recuriting in the present of the construction of an every line of the properties of an every including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting anglogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral actery thrombosis, intracardiac and venous thrombosis, cosulopathy, deep venous thrombosis (DVI), pulmonary embolism (PB) and transient schaemic attack. Soluble CD39 is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      540

The present cDNA sequence is a fusion construct encoding sol(soluble) CD19 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human L12 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic sischaemia, a thrombosia, embolism, platelet-associated ischaemic ischaemia, a thrombosis, including occonary attery thrombosis, cerebral attery thrombosis, including coronary artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis (bT), pulmonary embolism (PE), transfent ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or restenosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

mature N-terminus of hIL2 and soluble CD39 (solCD39) coding region, having apyrase activity. This produces high levels of solCD39 expression and activity in the transfected cells. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and cereminat, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, cor injury, atherosclerosis, peripheral vascular occlusion, precelampsia, coronary and cerebral ischaemia, thrombosis, disorders including lung, coronary and cerebral ischaemia, thrombosis, disorders including coronary, thrombosis, coagulopathy, deep venous thrombosis (DTF), pulmonary embolism (PE) and transfent ischaemic attack. Soluble CD39 is also useful cor preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       480

The present sequence is coding region of pIL2SolCD39, a fusion construct encoding sol (soluble) CD39 having apyrase activity. Fusion of 12 amino acids from the N-terminus of mature human IL2 to the solCD39 coding region results in high levels of both expression and activity in the supernatants of transfected cells. This is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorder including lung including coronary ischaemia and cerebral ischaemia, thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, venous thrombosis, thrombosis, ransient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   132

acids from the mature N-terminus of hill, a linker, FlAG tag sequence and soluble CD39 (solCD39) coding region, that has apyrase activity. This produces high levels of solLD39 expression and activity in the transmemelation of sollops expression and activity in the transmembrane domains. It retains the capacity to metabolise ATP cerminal transmembrane domains. It retains the capacity to metabolise ATP concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting considerable and recruitment, including platelet aggregation. Struke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, creatment of instable angina, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, creatment ischaemia, thrombosis, including lung, coronary and cerebral artery thrombosis, intracardiac and venous thrombosis, and cerebral artery thrombosis, lung, pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, reocclusion, stenosis or restenosis or stroke
                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the coding region of soluble CD39(solCD39) protein in mammalian expression systems. SolCD39 is used in the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, precelampsia, embolism, platelet-associated ischaemic disorder including ischaemia, coronary ischaemia and cerebral ischaemia, a thrombotic disorder including coronary artery thrombosis, cerebral artery thrombosis, thrombosis, thrombosis, thrombosis, coagulopathy, deep venous thrombosis (DYT), pulmonary embolism (PB), transfent ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the cDNA encoding the human soluble CD39 protein, a cell surface molecule, having apyrase activity. It is derived from a human B cell line CDNA library, referred to as MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, myocardial infarction, stroke, coronary artery disease or injury, atherosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemic disorders including lung, coronary and cerebral ischaemia, thrombosic disorders including coronary, peripheral and cerebral artery thrombosis, intracardiac and venous thrombosis, pulmonary

```
The present cDNA sequence encodes soluble CD39 having apyrase activity.

This was derived from a cDNA library prepared from a human B cell line

creferred to as MP-1. Soluble CD39 retains the capacity of wildtype CD39

Cr metabolise ATP and ADP at physiologically relevant concentrations as

concentrations as the ability to block and reverse ADP-induced platelet activation

and recruitment including platelet aggregation. This is used in the

creatment of unstable angina, myocardial infarction, stroke, coronary

cartery disease or injury, atherosclerosis, peripheral vascular occlusion,

creclampsia, embolism, platelet-associated ischaemia disconder including

coronary ischaemia, and exceptal ischaemia, a thrombocic

disporder including coronary artery thrombosis, cerebral artery

chrombosis, intracardiac thrombosis, peripheral artery thrombosis, thrombosis, coagulopathy, deep venous thrombosis, venous

thrombosis, thrombosis, coagulopathy, deep venous thrombosis, (DVT),

chimonary embolism (PE), transient ischaemic attack Soluble CD39 is also

cuseful for preventing thrombus formation or reformation, occlusion,

crecclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  41 GTTCAACCCAGAACAAAGCATTGCCAGAAAACGTTAAGTATGGGATTGTGCTGGATGCGG 100

                                                                                                                                                                                                                                                                                            The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-1BB CD30 or OX40 antagonist. The IL-17, IL-18, 4-1BB, CD30 or OX40 antagonists are useful for treating cardiovascular disorders, e.g. (chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restanosis, ischaemia or thrombocytopenic purpura, present sequence is a coding sequence used in the exemplification of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GCGTGGTGCATCAAGTAGAAGAATGCAGGGTTAAAGGTCCTGGAATCTCAAAATTTGTTC

Increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian cells comprises altering ATP gradient across biological membrane of target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GGTTGACCCAGAACAAGCATTGCCAGAAACGTTAAGTATGGGATTGTGCTGGATGCGG 196
                                                                                                                                                                                                                                                                                          The present invention relates to a method for increasing or decreasing drug resistance in target bacteria, yeast, plant or mammalian cells by altering the ATP gradient across the biological membrane of the target cell. The method is useful for modulating drug resistance of cells. It inseful for increasing the sensitivity of cells to chemotheraputic and antibiotic agents and increasing resistance to herbicides. The present sequence is human ATP diphosphohydrolase coding sequence. This sequence encodes was used in the present invention to modulate drug resistance. Note: The present sequence is not shown in the specification, but is referred to via its GenBank accession number
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GITCITCICACACACAGITIATACAICTATAAGIGGCCAGCAGAAAAGGAGAAIGACACAG

The invention relates to a conjugate (1) comprising an enzyme and a biodegradable polymer, where (i) enzymatic activity of the enzyme is conjugate to this that of the enzyme in the absence of the blodegradable polymer. Treature to that of the enzyme is longer than that of the conjumer, or (ii) the half life of the enzyme is longer than that of the enzyme in the absence of the polymer. The enzymetic activity (1) is at carryme in the absence of the polymer. The enzyme is a multimeric, soluble and/or extracellular enzyme, preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably an apyrase, particularly cardiovascular disease. Concer, sepais or adjensed diphosphate. The conjugate can be used to treat chrommal aggregation of platelets, particularly cardiovascular disease, concer, sepais or adjense related to graft transplant. (I) is also used for treating coronary artery disease or injury following myocardial infarction, unstable angina, atherosclerosis, pre-eclampaia, embolism, careful achaemia, reocclusion following thrombosia, thrombosis, proceediated with exposure to a foreign or injured tissue surface, in combination with angioplasty, carcidovascular devices. The present sequence represents a DNA encoding a human CD39 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               197 GTTCTTCTCACACAAGTTTATACATCTATAAGTGGCCAGCAGAAAAGGAGAATGACACAG

The bovine aorta (AAW04335 to AAW04318 and AAW04340) and porcine pancreatic (AAW04339) ATPDases have been partially sequenced. The sequences have been found to be highly homologous to a human lymphoid cell activation antigen designated CD39 (Maliszenski et at. (1994). J. Immunol.: 3574-3583). The complete sequences of the ATPDases types I and II have not been obtained yet. Assuming that the CD39 gene product is an ATPDase type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDases using the CD39 sequence (AAT38516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100

/note= "CD39 protein has ATP diphosphohydrolase activity"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphosphohydrolase activity under cellular activating conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatory or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence encodes human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-3584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gene therapy of inflammatory or immunological stimulation of platelet aggregation - using CD39 protein with ATP d1:phospho:hydrolase activity, useful for preventing or alleviating thrombotic condition in mammallan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GTTCAACCCAGAACAAAGCATTGCCAGAAAACGTTAAGTATGGGATTGTGCTGGATGCGG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gape

Human, gene; 88; immunological response; immunopathological condition; Crohn's disease; asthma; ulcerative colitis; Mypereosinophilia; irritable bowel syndrome; osteoarthritis; rheumatoid arthritis; acte monocytic leukaemia; antiinflammatory; antiasthmatic; antiulcer; osteopathic; antiarthritic; antirheumatic; cytostatic.

A composition comprising a plurality of CDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.

The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the treatment of an immunopathological condition is asmple with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and contacting a plurality of polynucleotide probes. The CDNAs method for identifying a plurality of polynucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray can be used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             833
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  893
the diagnosis of an immunopathology, such as Crohn's disease, asthma, ulcerative colitis, hypereosinophilia, irritable bowel syndrome, osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of manAs, cDNAs or genomic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                 GGTTGACCCAGAACATTGCCAGAAAACGTTAAGTATGGGGATTGTGTTGGATGCGG

The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to angioplasty, overproduction of tissue due to cicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, atterial restenosis, thrombophlebitis, ischemia, angina, mourism acterial restenosis, thrombophlebitis, ischemia, angina, macular degeneration due to age or osteoporosis. This sequence congestion of corresponds to a differentially expressed DNA used in the composition of
   polypeptide differentially expressed in angiogenesis.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSFORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
